 pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score diatribution.
                                                                                                                                                                                                                                                       Score

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are
                                                                           Nucleic acids encoding useful for preventing, cancers and metastases
                                                    Disclosure;
                                                                                                                                                                             (HUMA-)
                                                                                                                              2001-541565/60.
                                                                                                                                                       CA,
                                                                                                                                                                              HUMAN
                                                                                                                                                       Barash

                        The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune harmonytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, allergies, autoimmune themselves and the second of the cancer of the second of the cancer of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's
                                                                                                                                                                                    Disclosure; SEQ ID NO 8123; 1701pp + Sequence Listing; English
   colitis;
                                                                                                                                                                                                                          Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                       cancers and
                                                                                                                                                                                                                                                                                                            Rosen CA,

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) cartivity, and can be used in gene therapy and vaccine production. (I) coroteins and polynucleotides may be used in the prevention, diagnosis and camber the associated with inappropriate (I) expression. For cerample, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome cuthat affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) corotein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting cuthe nucleic acids into a host cell and culturing the cell to express the collapsose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic cancers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-NOV-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPs may also be used as antigens to produce antibodies and to identify modulators (agonists and antagonists) of the SPs. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/activities and the control of the SPs and as diagnostic agents for detecting the presence of SPs in samples.

The markers have a single nucleotide polymorphism (SNP) and are useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated polynucleotides, useful for genotyping nucleic acids for biallelic markers for the diagnosis of depression, comprises central nervous system disorder related biallelic marker \ \ _{|}

The RBP-7 coding sequence and regulatory sequences are useful for the recombinant production of the protein and for expressing heterologous nucleic acids. Primers and probes derived from the RBP-7 nucleotide sequence (e.g. AAZ87035-Z87099) are useful for DNA amplification and detection methods. RBP-7 biallelic markers (see AAZ8693-Z87034) are useful for diagnosis of disease related to alteration in the regulation or in the coding regions of the RBP-7 gene and for prognosis/diagnosis of an eventual treatment with therapeutic agents, especially agents acting on pathologies involving abnormal cell proliferation and/or differentiation, these include the process of the contract of the cont

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC transgenic cells and non-human animals comprising human ABC1 nucleic cardidy, and methods of gene therapy for the treatment or prevention of cardiovascular disease comprising the administration of an expression cc cardiovascular disease comprising the administration of an expression cc encountry and a cative fragment thereof. The invention also cc encountries compounds which mimic ABC1 activity, compounds which cc trimulate ABC1 expression and methods of screening for such compounds. In further relates to methods for determining whether a patient has an increased risk for cardiovascular disease due to polymorphisms in the CC prevent cardiovascular disease due to polymorphisms in the CC cerebrovascular disease, especially coronary artery disease, cerebrovascular disease, especially coronary artery disease, cerebrovascular disease, especially coronary artery disease, disease. They may also be used in the treatment of diseases, Niemann-Pick CC disease. They may also be used in the treatment of disease, Niemann-Pick CC disease, Huntington's disease, X-linked adrenoleukodystrophy and cancer. The invention specifically excludes proteins with the exact amino acid sequences of GenBank Accession No: CAM10005.1 and X75926, and the nucleic The present sequence represents a fragment of the human ABC1 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the human ABC1 cholesterol transporter protein C (B38082) and to nucleic acid sequences (C69120) which encode it. ABC1 is C a member of the ATP-binding cassette (ABC transporter) superfamily of C proteins, and plays a crucial role in cholesterol transport, particularly convolved in cholesterol trafficking in monocytes and fibroblasts, being C intracellular cholesterol trafficking in monocytes and fibroblasts, being C involved in cholesterol efflux from the cell. The gene encoding ABC1 is coated on chromosome 9931, and mutations in this gene are associated C with two genetic HDL (high density lipoprotein) deficiency disorders, C Tangler disease (TD) and familial HDL deficiency (FHA). These diseases C are distinguishable in that TD is an autosomal recessive disorder, while C that is inherited as an autosomal dominant trait. Low levels of HDL ("good C cholesterol") in the blood correlate with a high risk of cardiovascular C disease, particularly coronary artery disease, but also cerebrovascular C clasese, particularly restenosis, and peripheral vascular disease.

C cardiovascular disease. The invention provides genetic constructs and c transgenic cells and non-human animals comparising human animan animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC protein or gene therapy. The genes are isolated from a range of human CC tissues disclosed in the specification. The nucleic acids, proteins, CC antibodies and (antiagonists are useful in the diagnosis, treatment CC antibodies and (antiagonists are useful in the diagnosis, treatment CC and prevention of: (a) cancer, e.g. breast and ovarian cancer and CC other cancers of the adrenal gland, bone, bone marrow, breast, CC gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; CC constantial ischaemias; (d) wound CC healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; CC constantial fractions diseases such as viral, bacterial, fungal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a nucleic acid comprising a sequence of 18 cc bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with CC bisulphite, of genes associated with tumour suppression and CC oncogenes having a sequence taken from 536 (actually 533 since CC (Ss) and sequences complementary to (Ss). The nucleic acid may be a CC peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may CC form part of a set of probes for detecting the cytosine methylation state CC and/or single nucleotide polymorphisms and also to be used in an CC cancers and tumours. The probes can also be used in a methylation state CC and/or therapy of existing diseases associated with CpG dinucleotides e.g. CC cancers and tumours. The probes can also be used in a method for CC and/or therapy of existing diseases or the predisposition to specific CC and/or therapy of existing diseases or the predisposition to specific CC diseases, by analysing cytosine methylations. The parameters may be CC differences serving as basis for diagnosis and/or prognosis events which cCC are disadvantageous to patients. The present sequence is one of the CC complementary sequences derived from tumour suppressor genes and CCC complementary sequence with even numbered Seq ID numbers are the CCC complementary sequence of the orresponding odd numbered sequence (e.g. ID 2 and ID) ID 345 and ID 455. excent for those whose arterior sequence (e.g. ID 2 and ID) ID 345 and ID 455. excent for these whose arterior sequence (e.g. ID) and ID 100 control of the corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) and ID 100 corresponding odd numbered sequence (e.g. ID) are corresponding odd numbered sequence (e.g. ID) are corr

                                                                                                                                                                                                                                                                 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) corrections and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For comple, they may be used to treat disorders associated with decreased comple, they may be used to treat disorders associated with decreased comple, they may be used to treat disorders associated with decreased comple, they may be used to treat disorders associated with decreased complement the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) complement the patients own produce the secreted (I), by inserting complement cacids into a host cell and culturing the cell to express the contain. (I) proteins and polynucleotides may be used to prevent, complement in the case of haematopoietic-derived cells. AAK64703 concers and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM62169 corporates and cancers used in the exemplification of the present invention.

                                                                                                                                                                                                                                                19-JUL-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABCl expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition self lower than normal HDL cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.

          The invention relates to human breast cancer expressed polynucleotides (AALD/544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                      15-MAY-2000;
                                                                                                                                                                                                                                                                                                                                                                          10-JAN-2001; 2001WO-US00798

The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity.
